

PRIVOX PTT — Radio (Inrico T320). User Guide

This radio runs on the **PRIVOX PTT** system: it talks over the internet (WiFi or SIM), just like a walkie-talkie — press the button to talk, release to listen. On a channel (group) everyone in that group hears you.

1. What's on the radio

- **Screen** (touch) — shows groups and members.
 - **Orange side button (PTT)** — push-to-talk. The main button.
 - **D-pad with arrows** (up/down/left/right) and a **center button** — on-screen navigation.
 - **Back button** (curved arrow) — step back / minimize.
 - **Side knob** — volume.
 - **Red button** — power / end.
-

2. Power on and network

1. **Power on:** hold the power button until the boot logo appears.
 2. **Connect to the internet:**
 - **WiFi:** Settings → Wi-Fi → pick a network → enter the password.
 - or a **SIM card** with mobile data (if installed).
 3. Open the **PRIVOX PTT** app (icon on the screen).
-

3. Sign in (first time)

On first launch the radio asks for your **login and password** — enter the credentials you were given and tap **Sign in**.

After that the session is **remembered**: on later power-ons you don't need to sign in again — the radio opens straight to the main screen. It only asks again if you sign out yourself (see section 8).

4. Main screen — group list

After signing in you see the **list of groups (channels)**. Each group shows how many members are currently online.

Navigate with the **D-pad**:

Action	Button
Move through the list	arrows ↑ / ↓
Enter a group (open its members)	center button
Go back (to the group list)	Back button (curved arrow) or arrow ←

You can also use the **touchscreen** with your finger — whichever is easier.

5. How to talk (transmit)

1. Pick the **group** you want (enter it with the center button — it becomes the active group).
2. **Press and hold the orange side button (PTT)** and speak. The screen turns **green — TRANSMITTING**.
3. **Release** the button to listen for replies.

PTT always talks to your **active group** — the one you have entered.

Incoming audio plays automatically through the loud speaker.

6. Group members

After entering a group (center button) you see the **member list**:

- **green dot and green phone** — member is **online**;
- **blue dot and blue phone** — the Android phone is asleep but can be woken by a call;
- **gray dot and gray phone** — member is currently unavailable;
- whoever is talking is marked with an icon.

7. Private call to a member

You can call an online member or wake a sleeping Android phone:

1. Enter a group and find a member with a green or blue phone icon.
2. Highlight them with the arrows and press the **center button** (or tap the phone icon next to the name).
3. The member receives a **call**. A blue Android phone is woken through Firebase.

8. Volume, SOS, sign out

- **Volume**: turn the **side knob**.
- **SOS**: the alert icon on the screen — sends an emergency signal.

- **Sign out (switch user):** the sign-out icon in the top-right corner. It asks for confirmation "**Log out?**" — choose **Log out** only if you really want to sign out (you'll need to sign in again afterwards).

To just put the radio aside — **don't sign out**. The Back button (minimizes the app) or the power button is enough; your session is kept.

9. Troubleshooting

- **Too quiet (in or out)** — check the volume knob.
 - **Won't sign in / asks every time** — check the internet (WiFi/SIM) and that the login is correct; contact your administrator.
 - **No groups / empty** — make sure you have internet; your groups are assigned by the administrator.
 - **App seems frozen** — close and reopen it (Back button → open the PRIVOX PTT icon again).
